

Green Lake Fields - Field Lining Duties

Maps showing field numbering and interior marking layouts at Green Lake are available on our website:

http://www.woodlandsoccer.org/forms/GreenLake_Final_Layout_2009.PDF

We only do INTERIOR markings on the Green Lake fields. Seattle Parks line perimeters every Thursday or Friday. HOWEVER, if there has been a problem (e.g., Parks lining machine broke down and they are not lined) we MUST do the perimeters first.

We have three options:

- 1) Spray Paint Liner
- 2) Powdered Gypsum Liner
- 3) Large electric paint sprayer

When it is dry, use the Spray Paint Liner. When it is wet, use the Powdered Gypsum Liner.

Option 1 – Spray Paint Liner

The liner and paint are stored in the tan WSC Locker at SE baseball diamond (baseball field #1). The bin is locked with a keyed lock. The bin will be unlocked Friday afternoon for field setup. The lid tends to stick.

Please PULL HARD UPWARDS on the lid until it opens.

Cans of paint are in locker. These will be replenished weekly.

- Shake paint can vigorously for 1 minute
- Invert and slide into Liner such that nozzle sits in the metal clip.
- The length of nozzle should be perpendicular to the direction of travel in order to get a correct width of line.
- Squeeze handle of Liner to release paint. If line is thin check orientation of nozzle.
- Walk at an even pace and trace over existing lines.
- Keep STRAIGHT
- Once lining is completed, leave empties in the locker and close the lid.
- Please DO NOT lock the locker.

Option 2 – Powdered Gypsum Liner

Woodland Soccer has not used the Gypsum Liner method in the past year. These notes are from 2009.

The liner is stored in the WSC Locker (noted above). The Gypsum is stored in Parks Locker at NE baseball diamond (baseball field #2). No lock.

- Remove Liner from locker
- Ensure that Liner has funnel closed by checking position of lever on the Liner.
- Cut open a single sack of Powdered Gypsum and load into Liner hopper.
- Align arrow on Liner with the center of the line and position at start point of a line.
- Release lever to open funnel and move rapidly to achieve an even STRAIGHT line.

Option 3 – Large Electric Liner

Woodland Soccer stopped using the Large Electric Liner method in 2011. Notes on this need to be written.

Problems

If you have problems, call us:
